1) Is there a difference before and after installing the PV solar system? (i.e. monthly saving , room temperature)

Customer's Comments:-

- A) Utility consumption for my household due 24 hrs running of Pumps in Fish Pond plus Whole House Centralized Air-conditioning had been very costly around S\$1,700. Upon installation of Solar Panels, Utility Charges saved at average of S\$700 each month. I consider this savings very substantial. Rate of Recovery expected about 10years whilst Solar Panels expected to outlast more than 20 years covered by Warranty. Money worth spent.
- B) With Panels installed over the roof, there's been some reduction of Temperature on our 4th Floor Attic Room and also very much dampening of sounds when raining.

2) Would you recommend others about the PV system?

Customer's Comments:-

- A) Yes, the PV Systems definitely worthy to be installed. Furthermore this is Green Energy which saves our Earth.

3) Other comments:

Customer's Comments: NIL
